COMPILED OF REFERENCES ON GEOLOGY AND HYDROLOGY OF  
THE SNAKE RIVER DRAINAGE BASIN ABOVE WEISER, IDAHO

By M. D. Bassick

ABSTRACT

More than 1,100 references concerning geology and hydrology of the Snake River drainage basin above Weiser, Idaho, are compiled herein as part of the U.S. Geological Survey's RASA (Regional Aquifer-System Analysis) study of the Snake River Plain. The list of references is intended as a primary source of information for investigators concerned with previous studies in the basin. Reference numbers correlate with a key-word index to help the user select and locate desired references.

INTRODUCTION

The Snake River Plain is one of 28 regional aquifer systems in the United States selected for study by the U.S. Geological Survey in their RASA (Regional Aquifer-System Analysis) program. This report is one in a series resulting from the study, which began in October 1979.

As part of the Snake River Plain study, a literature search was made and a list of more than 1,100 reports concerning geology and hydrology was compiled. Reports listed were published prior to 1983 and concern areas in the Snake River drainage basin above Weiser, Idaho. Ready accessibility was a general criterion for including a report in this compilation. The compilation is intended as a primary source of information for investigators concerned about previous geological and hydrological studies in the basin.

REFERENCE SOURCES

References were obtained from the following agency publication lists, published bibliographies, computer library searches, and personal contributions. Not all publications were reviewed by the compiler.

#### ORGANIZATION AND USE OF THIS REPORT

The following references are separated into the general categories of geology (Nos. 1-679) and hydrology (Nos. 680-1107). Geophysical studies are grouped under geology; geochemical studies may be in either category, depending on the main emphasis as interpreted from the report title. Reference numbers correlate with a key-word index to help the user select and locate desired references. Most key words were obtained from report titles.
